

Prof. Brian L. Evans

Prof. Evans holds the Engineering Foundation Professorship at The University of Texas at Austin. He has a long track record of impactful research in signal processing for communication and image/video systems. Currently, he focuses on signal processing for 5G/6G cellular systems to increase data rates, reliability, and coverage. He has published 280+ refereed journal articles and conference papers and served as the research advisor for 32 PhD and 13 MS graduates. From his [Google Scholar page](#), his publications have been cited 15659 times for an H index of 56 as of Oct. 22, 2023. He was elevated to IEEE Fellow for “contributions to multicarrier communications and image display” in 2009. He received three Best/Top IEEE Conference Paper Awards, a 1997 U.S. National Science Foundation Career Award, and six teaching awards. He was elected President of the Faculty Senate at UT Austin 2019-20. He received the [2021 Civitatis Award](#) from UT Austin President Jay Hartzell for "dedicated and meritorious service to UT Austin above and beyond the regular expectations of teaching, research and service".

(a) Professional Preparation

Rose-Hulman Institute of Technology	Electrical Engineering & Computer Science	BS 1987
Georgia Institute of Technology	Electrical Engineering	MS 1988
Georgia Institute of Technology	Electrical Engineering	PhD 1993
University of California, Berkeley	Electrical Engineering & Computer Sciences	1993-1996

(b) Faculty Positions – all are in Electrical and Computer Engineering

The University of Texas at Austin	Assistant Professor	1996-2000
The University of Texas at Austin	Associate Professor	2000-2005
The University of Texas at Austin	Professor	2005-2009
The University of Texas at Austin	Engineering Foundation Professor	2010-present

(d) Synergistic Activities

Unified framework for full-duplex cellular with low-res data converters for energy efficiency (paper #1)
Developed algorithms for 5G cellular systems for joint beamforming and power control by coordinating basestations with low-res data converters (paper #2) and by using deep reinforcement learning (paper #3)
Derived 5G adaptive data converter resolution algorithms for massive antenna arrays with hybrid analog/digital beamforming and low-resolution data converters for energy efficiency (paper #4)
Modeled/mitigated impulsive interference in wireless (papers #5/6) and wireline (papers #9/10) systems
Developed large-scale visual quality assessment studies for HDR/synthetic images (papers #12/13)
Removal of hand jitter and rolling shutter artifacts when taking video on smart phones (paper #14)
Elevated to IEEE Fellow “for contributions to multicarrier communications and image display” (2009):

- Compensated visual distortion in image halftoning for use in printers and displays (paper #15)
- Developed downlink LTE basestation algorithms to maximize sum of user bit rates (papers #7/8)
- Made equalizer algorithms to double bit rates in ADSL receivers with change of software (paper #11)

Co-authored *Ptolemy Classic* (1993-96) for specifying, simulating, and synthesizing embedded digital systems. Downloaded from 450 domains (1998). Commercialized in Agilent Advanced Design System
