**Student Comments:**

1. The instructor was very flexible and accessible to me. I benefited a lot from the extra help that I received. Most of the time I was able to follow along in class. We started out with slides and then stopped. I thought the slides were very helpful in organizing the information. For the assignments, there were some that I spent a lot of time and thought I understood, but the requirements were not very clear. Although a large part of this class was application of concepts, I had trouble using examples from class and the text to help me do other things.
2. Ramesh has done a good job with this course. He was very effective in his way of communication. The course was an excellent one too.
3. Good.
4. The course was excellent and instructor taught it very well too. Project and assignments helped a lot in understanding various topics in distributed systems. I feel projects should be graded little leniently and not many marks should be cut for report.
5. The instructor has good communication skills to communicate the ideas effectively. I believe the course needs some more restructuring to include more practical and programming projects.
6. Instructor is good and course is excellent
7. Instructor knew material well, both as presented in text and in general. When questions regarding more explanation arised provided copies of his own lecture notes for many classes, which helped in allowing me to follow the lecture without depending too heavily on writing notes in class
8. Try to plan farther ahead; Slides are great for class; Assignments should be assigned early and discussed early to clarify any confusion.
