

If you mess up the board such that the debugger cannot find it, you can try to unlock the debugger  
“Could not initialize target device! Please power cycle the board and try again.”  
“Error: Flash download failed – Target DLL has been cancelled.”

- 1) Download and install the LM Flash Programmer <http://www.ti.com/tool/lmflashprogrammer>
- 2) Plug in your TM4C123 LaunchPad board (Keil should not be open)
- 3) Run the LM Flash Programmer application

Choose TM4C123  
Launchpad

- 4) Click Other Utilities TAB
- 5) Select "Fury, DustDevil, TM4C123 and TM4C129" and Click "Unlock"

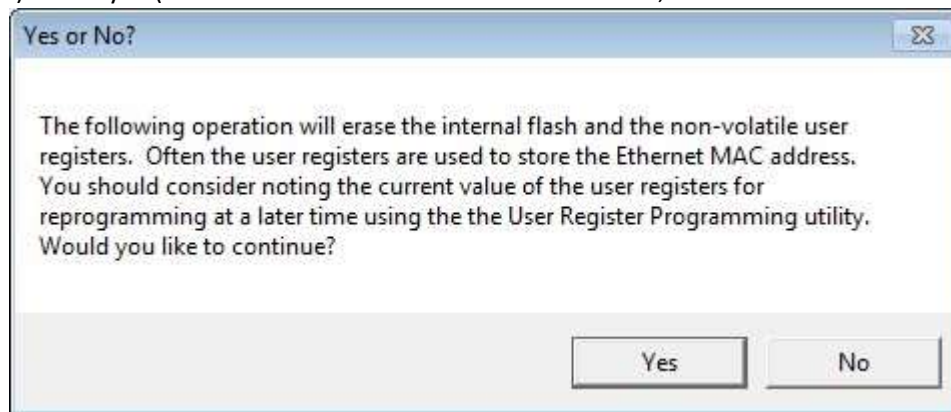

Other Utilities

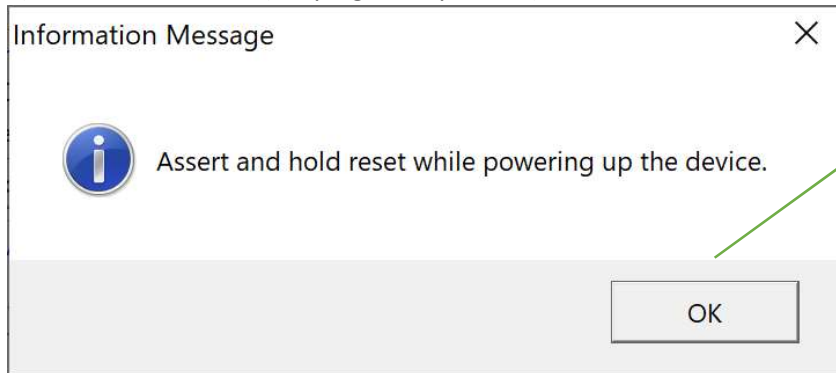

TM4C123

Unlock

- 6) Click yes (there are no MAC addresses on TM4C123; there are MAC addresses on TM4C1294)

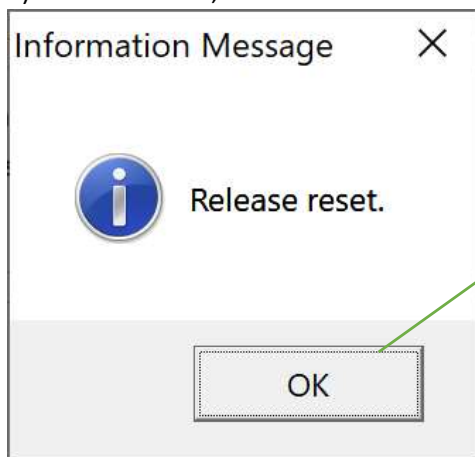

7) Follow directions (keeping reset pressed)

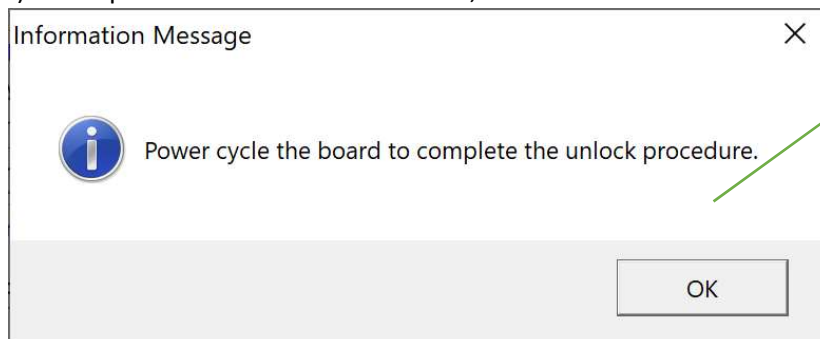

A) Press and hold reset on board,  
B) turn power off,  
C) turn power on and  
D) then click OK (holding reset  
down)

8) Release reset, then click OK

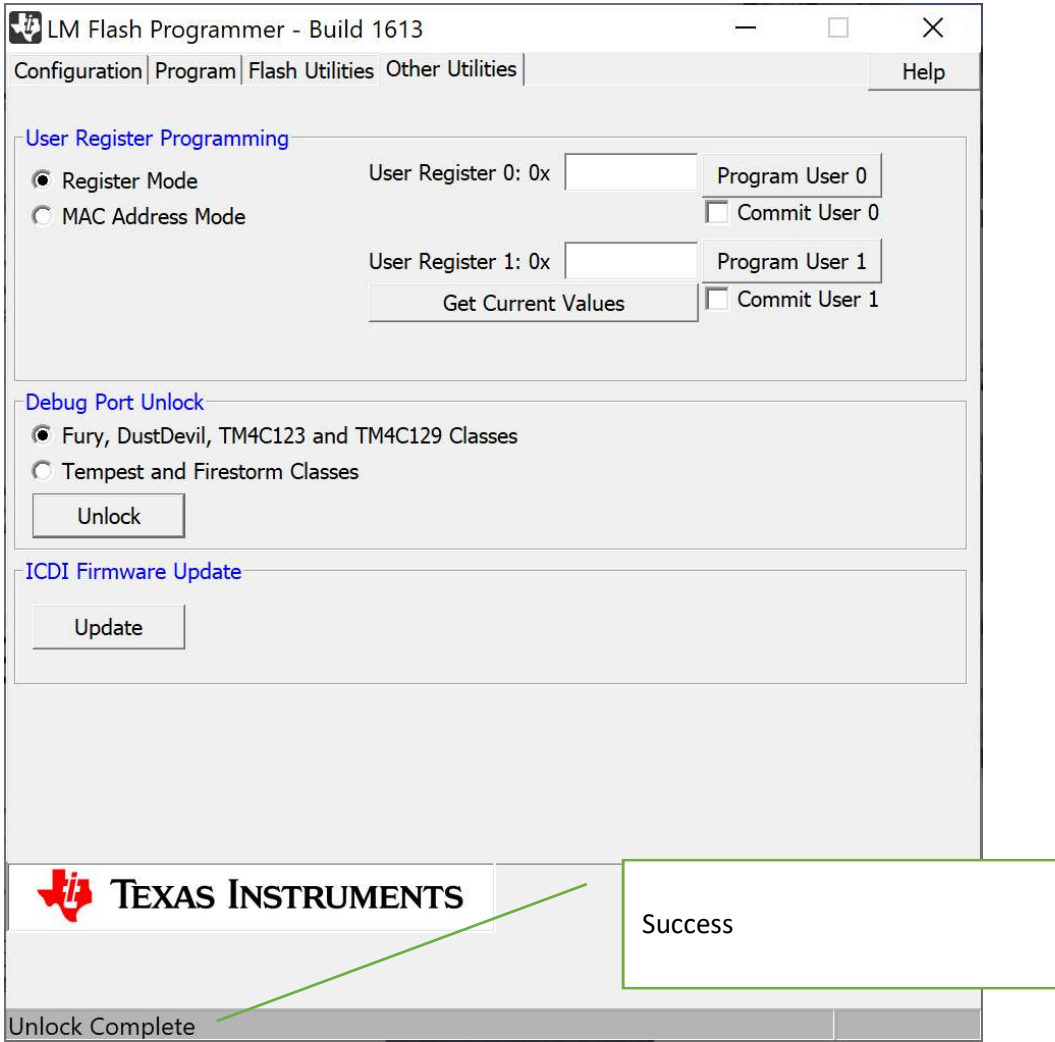

E) Release reset  
F) then click OK

9) Turn power on and off to the board, then click OK

G) turn power off,  
H) turn power on and  
I) then click OK

10) Notice the success message on bottom

11) Quit LM Flash Programmer
