Outline: Lunch and Learn Session

A. Embedded Systems

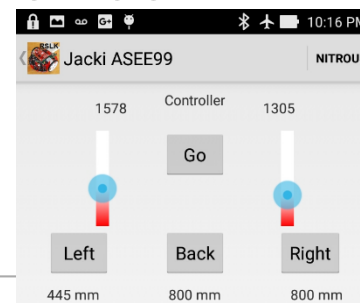

- Books, labs, competitions, MOOCs

B. Robot Systems Learning Kit

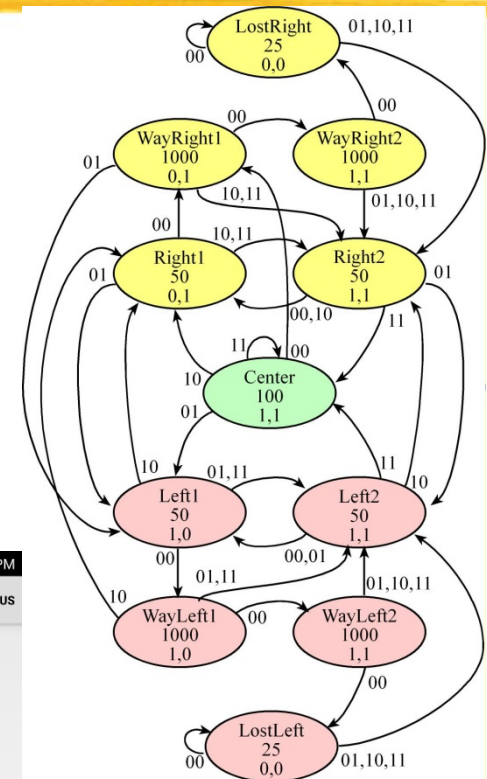

- Curriculum, hardware, software, tools, CCS
- Finite State Machine, Motor, logic analyzer

C. RSLK Hands on Experience

- Closed loop controller
- Bluetooth Low Energy

Download and install Android app <http://users.ece.utexas.edu/~valvano/android>

A. Courses, Books, and Labs

Introduction to Embedded Systems

Freshman, MOOC

System Level Design

Junior, PCB, IoT

Real-time Operating Systems

Senior/grad, CAN, Robot

- Cortex-M4
- serial, SPI, ADC,
- timer, PWM, DMA
- interrupt controller
- JTAG debugger
- floating point

EK-TM4C123GXL, 43 I/O pins, 32k RAM, 256k ROM, 80 MHz, USB, CAN \$13

MSP-EXP432E401Y, 90 I/O pins, 256k RAM, 1M ROM, 120 MHz, Ethernet \$20

MSP-EXP432P401R, 67 I/O pins, 64k RAM, 256k ROM, 48 MHz, low power \$13

3

A. Introduction to Embedded Systems

Volume 1 (freshmen EE or BME) 11,000 sold, 507 pages, \$38

- Switches and LEDs
- Design and Debugging
- Finite State Machine
- Interrupts, data flow
- DAC output, ADC input
- LCD graphics interface
- Fixed-point
- UART and distributed
- Capstone system design
 - video game, RSLK basic kit
- Assembly or C programming
- Design and Debugging
 - Simulation, logic analyzer, oscilloscope

A. Interfacing and Systems

Volume 2 (junior EE) 5,000 sold, 600 pages, \$40

- Graphics device driver
- Alarm clock
- Stepper or DC motor
- Music player
- Temperature acquisition
- Wifi and IoT
- Capstone design

- Hardware/software debugging – open ended, PCB, Power
- Design and debugging – RSLK advanced kit
- Analog, power, computer

A. Real-Time Operating Systems

Volume 3 (senior/grad EE) 3,600 sold, 485 pages, \$40

- Memory manager, device driver
- Thread switching RTOS
- Blocking semaphores
- Priority scheduler
- Digital and analog filters, FFT
- Digital control systems
- File system
- CAN or Ethernet network
- Autonomous robot racing

- TM4C
- MSP432

MOOC running on edX

A. Competition

Volume 1 (freshmen EE or BME)

- Handheld game, peer review

Volume 2 (junior EE)

- Design cycle, testing, systems

Volume 3 (senior/grad EE)

- Autonomous Robot Racing

A. Embedded Systems – Shape the World

- What is and isn't a MOOC?

- Spring 14, 15, 16, 17, 18
- over 120,000 enrolled
- over 3 million video hits
- over 7% got certificates
- 2/3 who started, finished
- 95% approval rate

- Lab kit + Teaching videos

- LaunchPad simulator, graders, voltmeter, scope

- IoT: wifi and BLE in MOOC

Physical kit increased completion rates

- Introduction, I/O, C programming
- Interrupt-driven interfacing, wifi
- Real-time operating systems, BLE

B. TI Robotics System Learning Kit

www.ti.com/rslk

Learn, Build & Compete

- **Comprehensive, modular**, curriculum to teach embedded systems and applications
- Accompanied by a robotics hardware kit that provides an active learning experience
- Courseware will guide you to **design, build, code** and finally **test** your own robotic system
- Collaborate to compete and develop **problem solving skills, systems knowledge** and **creativity**

 5: Battery and Voltage Regulation	 10 Debugging Real-time Systems	 15 Data Acquisition	 20 Wi-Fi

10

B. Example module: introduction

Introduction: Battery and Voltage Regulation

Educational Objectives:

MEASURE Voltage, current, and energy for a battery
UNDERSTAND Voltage regulation for the robot
INTERFACE The circuits needed to power the robot from batteries
Prerequisites (Module 2)

- Voltage, current, energy, power (Module 2)
- Resistance, capacitance (Module 2)

Recommended reading materials for students:

- Volume 1 Section 1.1
Embedded Systems: Introduction to the MSP432 Microcontroller,
ISBN: 978-1512185676, Jonathan Valvano, copyright © 2017
or
- Volume 2 Section 9.2
Embedded Systems: Real-Time Interfacing to the MSP432
Microcontroller, ISBN: 978-1514676585, Jonathan Valvano,
copyright © 2017

Every embedded system needs power to operate. The source of power could be

- 120 VAC 60 Hz, with an AC to DC converter
- DC power, like +5V on USB or +12V in an automobile
- Battery
- Energy harvesting like solar or EM field pickup

When debugging the LaunchPad, you use +5V from the PC via the USB cable. However, to run the robot autonomously, it will need battery power. The battery voltage is not constant; it decreases with age and use. Therefore, you will use a **regulator** to provide a constant voltage to power most of the electronics for the robot. In this module, we will introduce two types of regulators: linear and switching. There are many considerations when choosing a regulator, and we will discuss some of these considerations.

You will power the robot motors directly off the battery voltage. The Romi Chassis (Pololu part #3502) can hold 6 AA batteries. If you use NiMH batteries (1.2V each), this will create a +7.2V source for the robot. The motors do not need a constant voltage to operate, and running directly off the batteries is the most

efficient use of energy. As you might imagine, the motors use most of the power required by the robot. The robot will take the battery +7.2V input and create a +5V regulated power source. In particular, you will use the Motor Driver and Power Distribution Board for Romi Chassis (Pololu part #3543). We will explain the battery and voltage regulation in this module. You will connect the +5V regulated power source to the LaunchPad, and the LaunchPad will create a +3.3V power source using its own regulator. The LaunchPad powers the MSP432 with this +3.3V. The MSP432 itself has regulators inside the chip. For example, V_{CORE} is the internal voltage at which the processor operates, and it is typically +1.2V. You will power the motors directly off the battery, some of the external devices with +5V and others with +3.3V.

The **energy** (E in joules) stored in a battery can be calculated from voltage (V in volts), current (I in amps), and time (t in seconds). Energy has neither polarity nor direction. The energy rating for the battery is given in amp-hr, because the assumption is the voltage is constant. The NiMH batteries listed in the lab bill of materials (BOM) are rated at 1900 mA-hr. This means the battery can supply 1 amp for 1.9 hours. Six of these batteries, placed in series, can supply 7.2V at 1 amp for 1.9 hours.

In the lab associated with this module, see Figure 1, you will study the batteries, measuring their energy storage. Next, you will build/interface the circuits needed to power the LaunchPad off batteries.

Figure 1. Romi Chassis, Motor Driver and Power Distribution Board, LaunchPad, and small protoboard.

B. Example module: lecture slides

Battery and Voltage Regulation

You will learn in this module

- Power sources - Batteries
 - Voltage, V (volts)
 - Current, I (amps)
 - Energy, E (joules)
- Voltage regulation (Constant Voltage)
 - Purpose
 - Types
 - Circuits
- Performance measurements (Lab)
 - Monitoring Battery Voltage, Current, Storage
 - Voltage regulation (DC voltmeter)
 - Noise (AC voltmeter, oscilloscope)

**Motor Driver and Power Distribution board
Powering TI's Launchpad Development board**

B. Example module: lab manual

Lab 5: Battery and Voltage Regulation

Figure 2. Battery circuit.

The second step is to configure the MDPDB for use on the robot. Figure 3 shows the locations of the power-related pins on the motor driver board.

Figure 3. Motor Driver and Power Distribution Board for Romi Chassis.

Follow these steps to configure the motor driver board for the robot:

- 1) Cut the VPU—VREG jumper on the MDPDB
- 2) Cut the VCCMD—VREG jumper on the MDPDB
- 3) Solder a ground wire from the MDPDB to ground on the LaunchPad. We suggest you review the entire MDPDB User's Guide. Make sure not to use holes needed later for the motors.
- 4) Connect VREG (+5V) from the MDPDB to +5V on the LaunchPad. You will need a way to connect/disconnect +5V. We suggest you solder one end of a wire to the VREG signal on the MDPDB and use a female header to connect it to +5V on the LaunchPad.
- 5) Connect VPU from the MDPDB to 3.3V on the LaunchPad
- 6) Connect VCCMD from the MDPDB to 3.3V on the LaunchPad
- 7) Solder a wire with a male header to the +3.3V power. Solder a second wire with a male header to ground. These two will be used to bring power to the solderless breadboard (shown in Figure 4).

Figure 4 shows the partially completed power system.

Figure 4. Motor Driver and Power Distribution Board connected to the LaunchPad. Grounds connected. VREG (MDPDB) to +5V (LaunchPad). +3.3V (LaunchPad) to VPU (MDPDB) and VCCMD (MDPDB).

Lab procedures
Lab videos

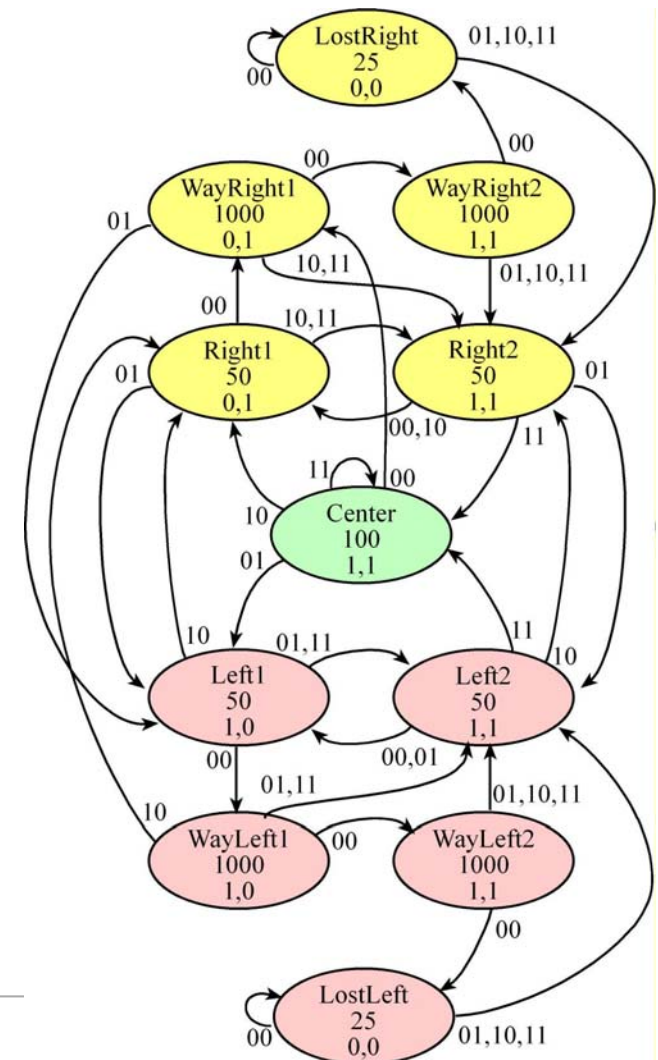

B. Module 1 Getting Started

- TI-RSLK Module 1 - Lab video 1.2 - Getting started with CCS 02:14
 - <https://training.ti.com/ti-rslk-module-1-lab-video-12-getting-started-ccs?cu=1135347>
- TI-RSLK Module 1 - Lab video 1.3 - Running the TExaS logic analyzer 03:26
 - <https://training.ti.com/ti-rslk-module-1-lab-video-13-running-texas-logic-analyzer?cu=1135347>

Note that TExaS display also includes an Oscilloscope output

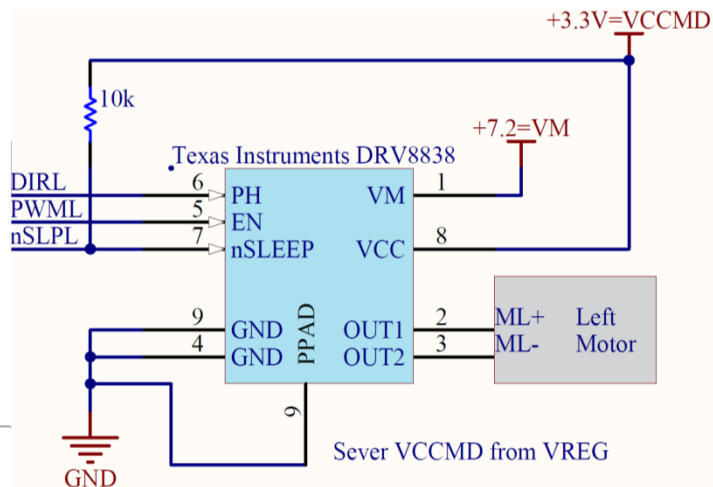

B. Module 3 Architecture, Module 7 Finite State Machine

- Last two minutes of ARM architecture (start at 18:00)
 - Exposes important concepts (critical section)
 - <https://training.ti.com/ti-rslk-module-3-lecture-video-part-i-arm-cortex-m-architecture?cu=1135347>
- 7.2 FSM lab video (start at 1:44)
 - <https://training.ti.com/ti-rslk-module-7-lab-video-7-2-running-solution-code-designing-better-fsm?cu=1135347>

B. Module 12. DC motors

- Lab 12 motor lab measurements 2:39
 - <https://training.ti.com/ti-rslk-module-12-lab-video-12-1-demonstrate-motor-fundamentals?cu=1135347>
- Lab 12 present patterns 1:46
 - <https://training.ti.com/ti-rslk-module-12-lab-video-12-2-demonstrate-robot-moving-preset-pattern?cu=1135347>

C. Tachometer Hands On Activity

- Place the robot up on blocks (so it doesn't fly off table)
- Make sure 7-bit jumper is in place on LaunchPad
- Connect USB from LaunchPad to PC
- Turn on robot power
- Start TExaSdisplay
 - Execute **Open Next Port** until it connects to LaunchPad
 - Click on logic analyzer toolbar (View->Logic Analyzer)
- Run Lab 17 (press switch 3)
 - Lab 17 is autonomous racing robot solution, proportional controller
 - It attempts to follow constant distance from the closest wall
- Observe PWM outputs and tachometer inputs on logic analyzer

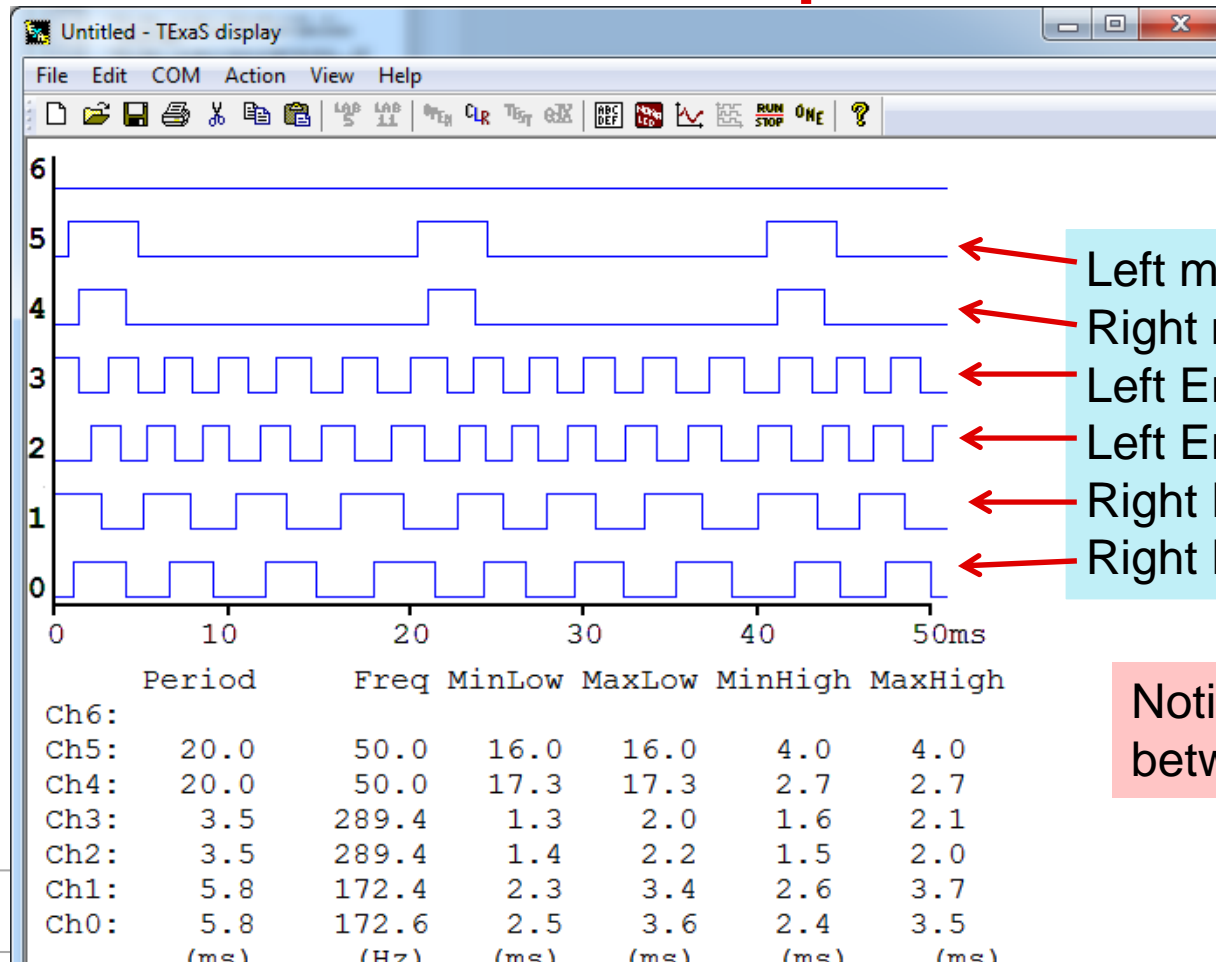

C. Module 17 Proportional Control

```
void SysTick_Handler(void){ // runs at 100 Hz
    if(LeftDistance < RightDistance){
        Error = LeftDistance - SetPoint;
    }else {
        Error = SetPoint - RightDistance;
    }
    UR = PWMnominal+Kp*Error; // proportional control
    UL = PWMnominal-Kp*Error; // proportional control
    if(UR < (PWMnominal-SWING)) UR = PWMnominal-SWING; // -1000 to +1000
    if(UR > (PWMnominal+SWING)) UR = PWMnominal+SWING;
    if(UL < (PWMnominal-SWING)) UL = PWMnominal-SWING;
    if(UL > (PWMnominal+SWING)) UL = PWMnominal+SWING;
    Motor_Forward(UL,UR);
    ControllerFlag = 1;
}
```

Which switch you press
0 – PWMnominal = 2500
1 – PWMnominal = 3000
2 – PWMnominal = 3500
3 – PWMnominal = 4000
4 – PWMnominal = 4500
5 – PWMnominal = 5000

C. Module 17 PWM output and Tachometer input

Left motor PWM, P2.7
Right motor PWM, P2.6
Left Encoder A, P8.2
Left Encoder B, P9.2
Right Encoder B, P10.5
Right Encoder A, P10.4

Notice the relationship
between power and speed

C. BLE Hands On Activity

- Change TExaSdisplay mode to text
 - If you power cycle the robot, restart TExaSdisplay
- Reset the MSP432 (observe robot number)
- Download and install RSLK Android app
 - <http://users.ece.utexas.edu/~valvano/android>
- Start RSLK Android app
- Run Lab 19 (press switch 4)
 - Connect the RSLK to your robot
 - There are 4 services (RSLK Service is the interesting one)
 - The RSLK service has 4 characteristics (click on Jacki sensors)

RSLK Service has four characteristics

BLE Device Scan

Jacki ASEE99
A0:E6:F8:BE:1D:80

Jacki ASEE98

Jacki sensors

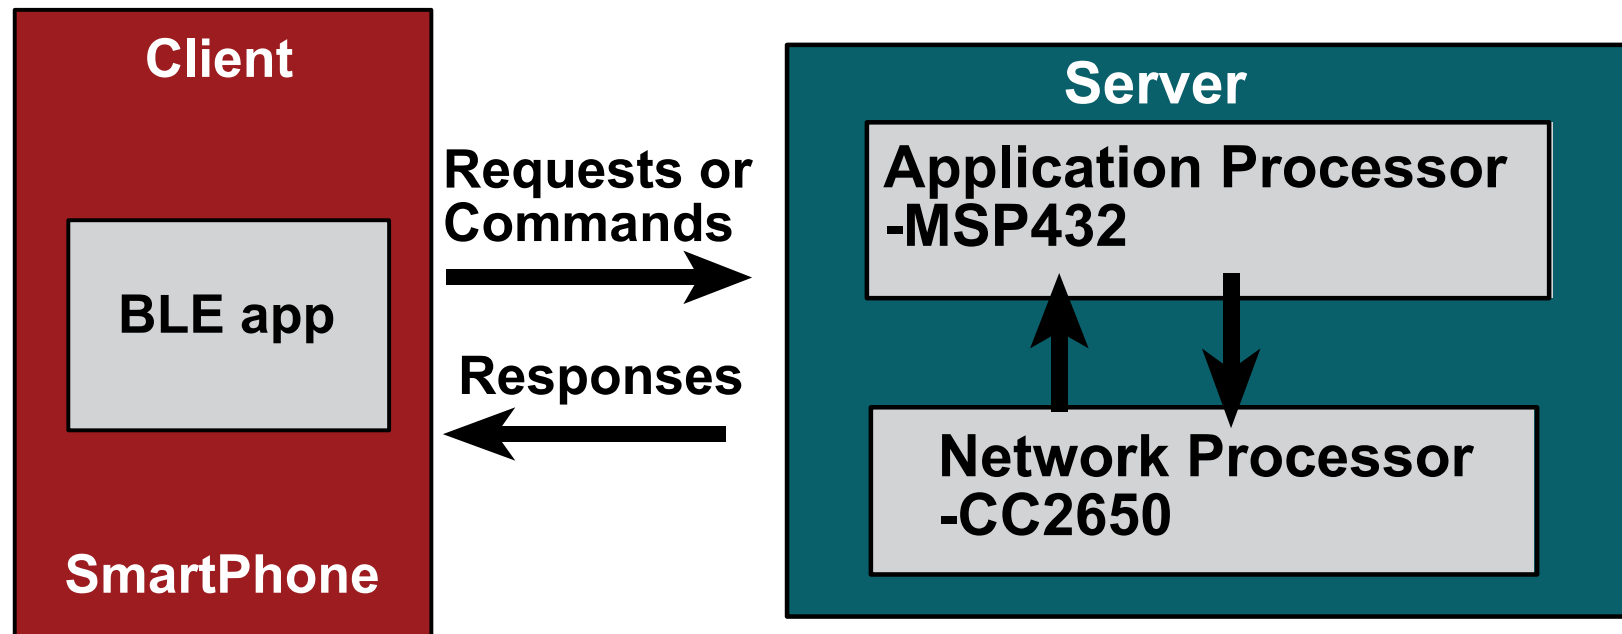

Click on characteristic to read

RSLK Robot controller

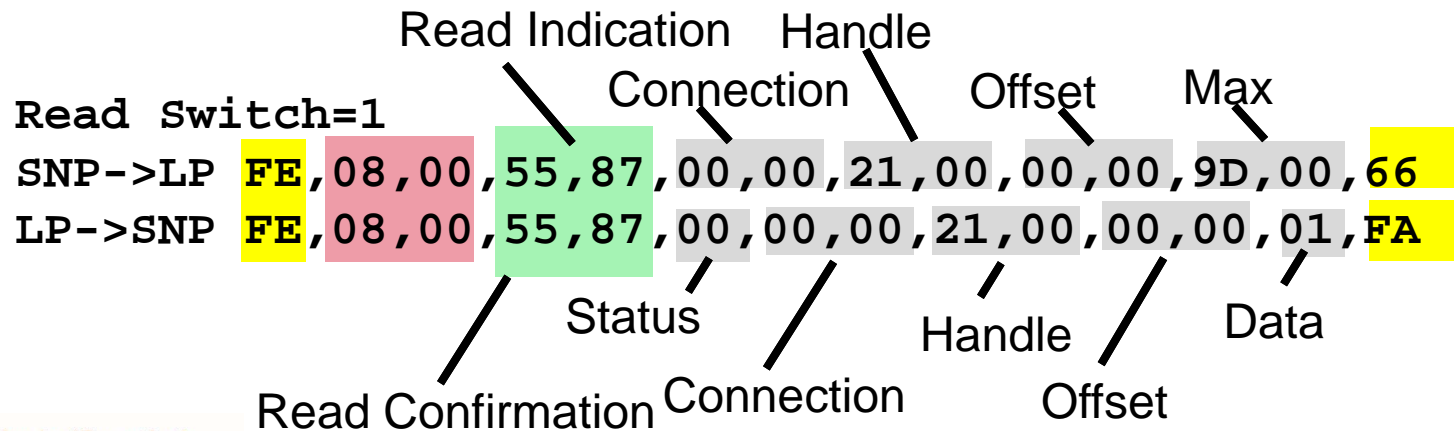

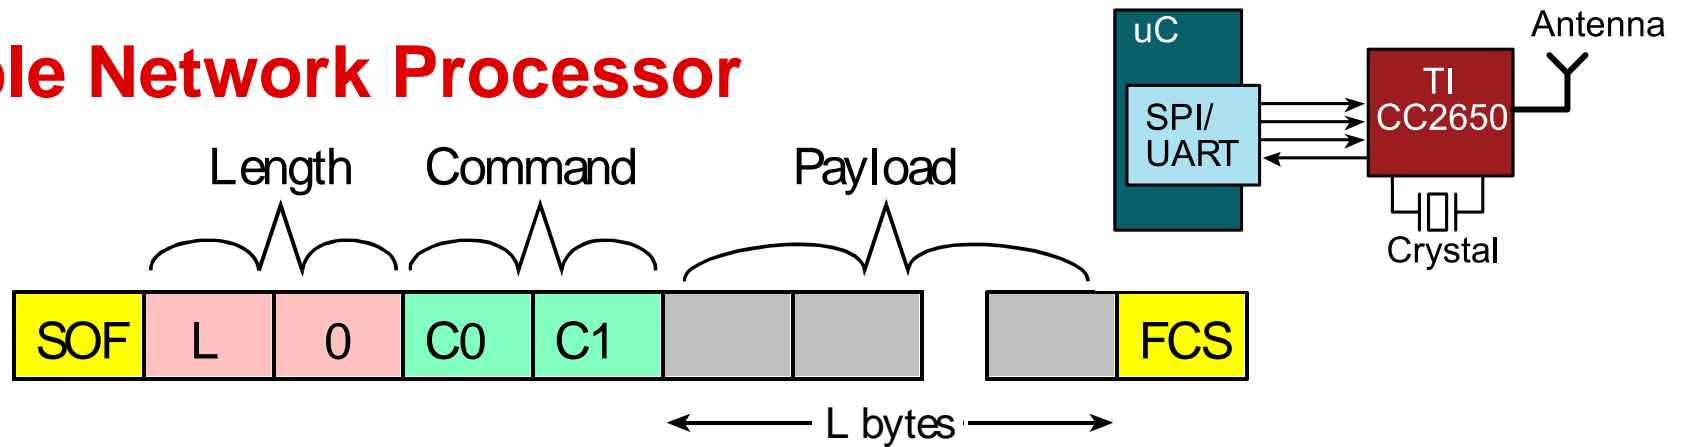

- Push the buttons
- Move the sliders
- Observe sensor data
 - On touch to slider
- Observe the BLE packets

Client-server

Simple Network Processor

BLE made simple

```
void BLE_Init(uint8_t robotNum){volatile int r;
    EnableInterrupts();
    r = AP_Init();
    AP_AddService(0xFFF0); // RSLK GATT service
    //-----
    JackiCommand = 0; // read/write parameter
    AP_AddCharacteristic(0xFFF1,1,&JackiCommand,0x03,0x0A,"JackiCommand",&ReadCommand,&WriteCommand);
    //-----
    JackiBumpSensor = Bump_Read(); // read only parameter (get from bump sensors)
    AP_AddCharacteristic(0xFFF2,1,&JackiBumpSensor,0x01,0x02,"JackiBumpSensor",&ReadJackiBumpSensor,0);
    //-----
    JackiSpeed[0] = JackiSpeed[1] = 500; // read/write parameter
    AP_AddCharacteristic(0xFFF3,4,JackiSpeed,0x03,0x0A,"JackiSpeed",&ReadJackiSpeed,&WriteJackiSpeed);
    //-----
    // four 16-bit read only parameters (get from IR distance sensors)
    AP_AddCharacteristic(0xFFF6,8,SensorData19,0x01,0x02,"JackSensors",&ReadDistance,0);
    //-----
    AP_RegisterService();
    AP_StartAdvertisementJacki19(robotNum);
}
```

Self-discovery

- Turn off power
 - Remove 7-pin shorting jumper
 - Disconnect USB
 - Turn on robot
 - Run one of the labs
 - Sw0 Lab 7 FSM line follow (use fluffy black tape)
 - Sw1 Lab 12 Simple motor open loop control
 - Sw2 Lab 16 Tachometer, incremental controller to set speed
 - Sw3 Lab 17 Proportional control, autonomous driving using distance sensor
 - **Sw4 Lab 19 BLE**
- Sign up for robot racing
 - 4:30-6pm in TI pavilion
 - 3 minute races
 - prizes

Takeaway: Bottom up

- **Bottom up: From simple to complex**
 - Transistors → Gates → Computer → Systems
 - Assembly → C → Java/C++ → LabVIEW
- **Abstraction**
 - Understand → Put it in a box → Use the box
- **Systems**
 - Take two systems → Connect → New system+

RSLK Race @ ASEE Robotics Pavilion Monday

- **Register your team to race for a prize**
 - 4:30pm-5pm Practice at RSLK Racing School
 - 5pm-6pm Track Races
- **Workshop teams get priority, races open to public after completion of Racing School**

Race Rules

Semifinal heats 4 robots at a time
3 minute time limit or first to 4 laps

Top 8 race in finals, Top team wins prize
1st Place Prizes for teams of max 4 people

LaunchPad tester

Adopt a book →

Free parts for LaunchPad tester

<http://users.ece.utexas.edu/~valvano/arm/tester/>

Takeaway: Empower Students

Students need to learn outside of lab

- **Students should have their own DVM**
- **Show labs to friends and parents**
- **Encourage them to work beyond lab**
 - Find sources of free parts
 - Give simple stuff away
- **Mentor their careers**
 - Job versus grad school
 - Online presence

Successes: Competitions

Students need to appreciate relevance

- **Appropriate use of teams**
- **Build things that are fun to play with**
 - Show off to friends, family, interviewers
- **Competitions**
 - Fun, intense
- **Open-ended**
 - Creativity, life-long learning, springboard
